Slides, speaking notes, and links to resources: bit.ly/oerudl2021

August 18, 2021

Open educational resources are...

"Freely accessible online."

Agenda

- Technical Accessibility
 - Web Content Accessibility Guidelines' 4 principles
 - Accessibility in educational resources
- Universal Design for Learning
- Inclusive Design
- Questions

Technical Accessibility

Web Content Accessibility Guidelines (WCAG)

- 1. Perceivable
- 2. Operable
- 3. Understandable
- 4. Robust

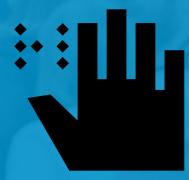

Principle 1: Perceivable

Information and user interface components must be presented to users in ways they can perceive.

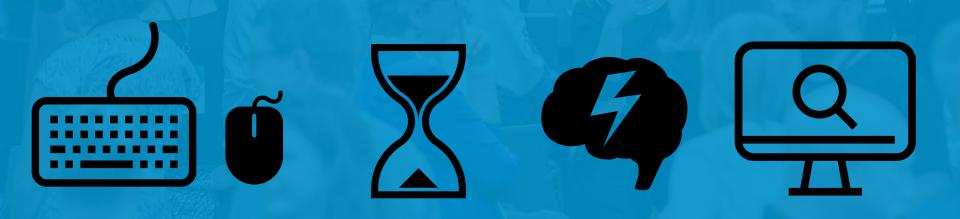

Principle 2: Operable

User interface components and navigation must be operable.

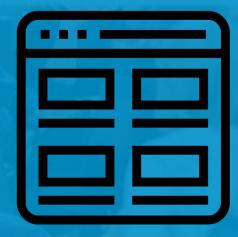

Principle 3: Understandable

Information and the operation of user interface must be understandable.

Organizing Content

- ☐ Content is organized under headings and subheadings
- ☐ Headings and subheadings are used sequentially

<h1>Chapter 1: Introduction to Sociology</h1>

<h2>Introduction</h2>

Concerts, sporting matches and games, and political rallies can have...

<h2>1.1 What is Sociology</h2>

A dictionary defines sociology as the systematic study of...

<h3>What are Society and Culture?</h3>

Sociologists study all aspects and levels of society...

Links

- ☐ The link text makes sense out of context
- ☐ Links do not open in new windows or tabs (unless a text reference is provided)
- ☐ The web address is available for those using a print copy

Not accessible

For more information on web accessibility, click here.

Not accessible

For more information on web accessibility, go to https://opentextbc.ca/accessibilitytoolkit/.

Accessible

For more information on web accessibility, refer to the *Accessibility Toolkit*.

Accessible

For more information on web accessibility, refer to the *Accessibility Toolkit* [New Tab].

Accessible

The <u>BC Open Textbook Review Template [Word File]</u> provides guidelines for completing an open textbook review.

Data Tables

- ☐ Tables include a caption.
- ☐ Tables include row and/or column headers.
- □ Row and column headers have the correct scope assigned.
- ☐ Tables do not have merged or split cells.
- ☐ Tables have adequate cell padding.

Table 15.1 One way scholars have categorized religions is by classifying what or who they hold to be divine

Religious Classification	What/Who Is Devine	Example
Polytheism	Multiple gods	Hinduism, Ancient Greeks and Romans
Monotheism	Single god	Judaism, Islam, Christianity
Atheism	No deities	Atheism, Buddhism, Taoism
Animism	Nonhuman beings (animals, plants, natural workd)	Indigenous nature worship, Shinto

Audio

☐ Include a transcript

Examples: Podcasts, interviews, recorded lectures

A transcript provides a text equivalent of audio content. It includes

- Speaker name(s)
- Headings and subheadings
- All relevant audio content, including
 - All speech content
 - Relevant descriptions of speech
 - Descriptions of relevant nonspeech audio

Video

- ☐ All relevant visual information is conveyed via an audio description or transcript
- ☐ All relevant audio information is conveyed via captions or a transcript

Captions: Text that is synchronized with audio in a video.

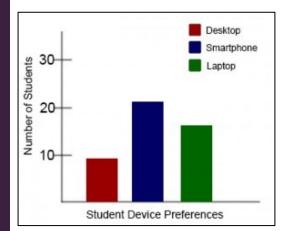

Audio descriptions: Audio descriptions of visual content shown in the video that isn't conveyed through audio

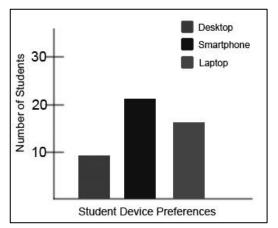

Transcript: Includes the same information as with audio transcripts, but may also include relevant description of visual content

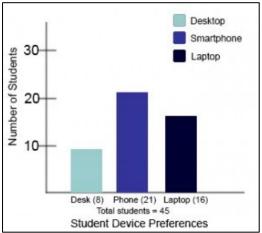

Colour and Colour Contrast

- ☐ Information is not conveyed by colour alone
- ☐There is sufficient colour contrast between foreground and background

Contrast Checker

https://contrastchecker.com/

Images

- Images that convey information include alternative text (alt text) descriptions of the image's content or function.
- ☐ Images that are purely decorative do not have alt text
- ☐ Graphs, charts, and maps include contextual or supporting details in the text surrounding the image.
- ☐ Images do not rely on colour to convey information.

A decorative image does not need a text description.

- Is primarily for design
- Does not convey content (or are already described in surrounding text)

A functional image contains content that requires a text description.

- Alt text
- Surrounding text or caption
- Long description

Text Descriptions

What to describe

- Content/purpose of the image
- Main focus of the image
- May depend on audience/context

How to describe

- Clear, concise, and accurate
- Go from general to specific
- Use words rather than symbols when writing math or scientific expressions
- Who? What? Where? When? Why?

Alt Text

A short text description of an image that appears in the alt attribute of the image tag.

- Will not appear visually
- Can be accessed by text-to-speech technology (including screen readers)
- Should be less than 125 characters
- Does not need to include "Image of.."
- If left blank, a screen reader will skip the image.

Surrounding Text or Caption

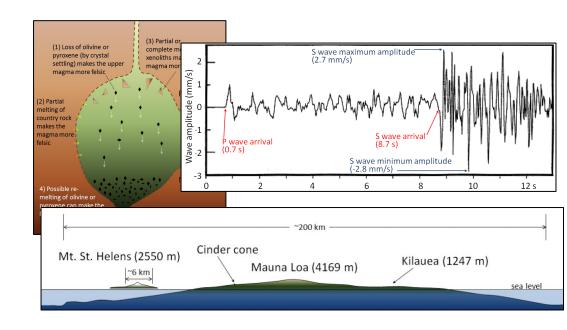

Figure 2.3 In 1871, the newcomer population in B.C. was still outnumbered by Aboriginal people who were, nevertheless, being hustled onto reserves and mostly without treaties. A Stó:lō woman, weaving baskets, n.d.

Long Descriptions for Complex Images

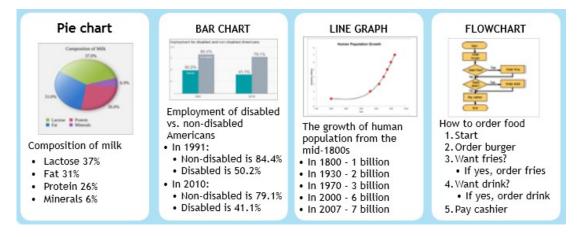

Examples

pie charts, bar carts, line graphs, flow charts, diagrams, illustrations, math graphs, and maps

Lists

Bulleted and numbered lists can be used to present information found in

- Pie charts
- Bar charts
- Line graphs
- Flow charts

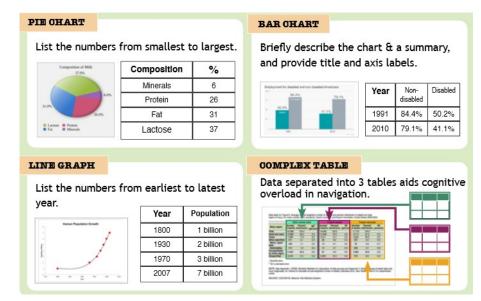

Adapted from © Supada Amornchat. Complex Images for All Learners [PDF]. CC BY-NC-SA.

Data Tables

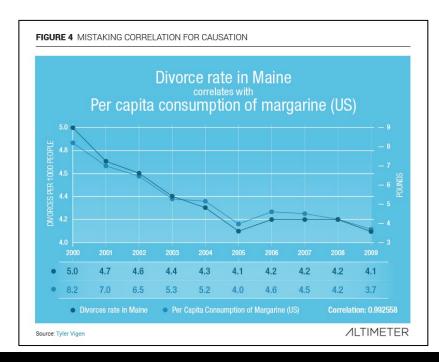

Data tables can be used to present information found in

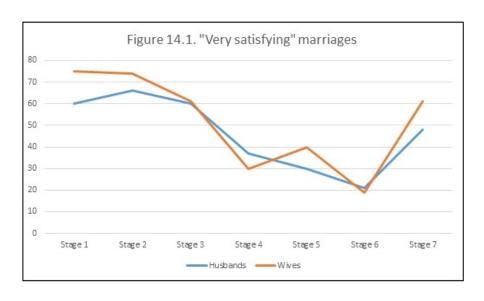

- Complex tables
- Bar charts
- Line graphs
- Pie charts

How would you describe these images?

"Mistaking Correlation for Causation" by Altimeter. © CC BY-NC-SA "Figure 14.1" © William Little. Based on data from Lupri and Frideres, 1981. CC BY.

Symbols

X or
$$\times$$
 or \cdot

- or - or - \cdot

÷ or /

 $\frac{1}{2}$ or $\frac{1}{2}$

Formulas: MathJax

- ☐ Formulas have been created using MathML or LaTeX
- ☐ Formulas are rendered with MathJax.

MathJax

This a display engine that translates mathematical markup (like MathML or LaTeX) into accessible, high-resolution equations.

This allows the equations to be rendered **aurally** or **visually**.

Formulas: Images with Alt Text

☐ Formulas are images with alternative text descriptions if MathML is not an option.

$$m = \frac{m_0}{\sqrt{1 - \frac{v^2}{c^2}}}$$

Alternative Text:

m equals begin fraction m sub 0 over begin square root 1 minus begin fraction v sup 2 over c sup 2 end fraction end square root end fraction

Accessibility Checkers

WAVE (wave.webaim.org)

- Can be used to evaluate web content
- Can paste a link to a website or install it as browser plugin

Office 365 Products

(Word, PowerPoint, Excel, Email)

Built-in accessibility checkers

Beyond Technical Accessibility

- Limitations of accessibility checklists
- Universal Design for Learning (UDL)
- Inclusive design
- Adopting accessible practices

Accessibility Checklists

Strengths

- Easy to understand and follow
- Highlight the most important technical considerations to make sure students with disabilities can access the material

Weaknesses

- Accessibility as something that we can go back and fix later
- Do not ensure good design
- Do not account for the multiple formats of OER
- Students face challenges not addressed in standard accessibility checklists
- Does not ensure equal access to learning outcomes

What is an average student?

The classroom, "far from neutral, is constructed for a mythical, "able-bodied," neurotypical norm that neither reflects nor accommodates the wide range of diverse learners within it, regardless of whether these learners have been diagnosed with a disability" (Wilson, 2017).

How do we understand disability?

Medical Model: Disability is an individual problem, affliction, or deficit that needs a cure or accommodation.

Social Model: Disability emerges when there is a mismatch between a person, their environment and tools they have available to them, and their goals.

What else affects accessibility?

- Day-to-day life
- Digital literacy
- Access to technology
- Structure of information
- Presentation of information

Universal Design for Learning (UDL)

Provide multiple means of

- Engagement (WHY)
- Representation (WHAT)
- Action and Expression (HOW)

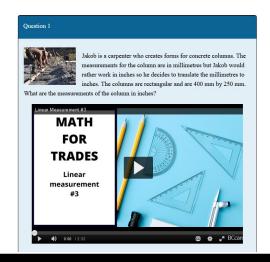

Multiple Means of Representation: Multiple Modalities

Video, audio, text, images, interactive activities

Click play on the following audio player to listen along as you read this section.

This section provides a brief description of two of the most fundamental electrical relationships: Ohm's law, which describes current flow in electrical circuits, and Watt's law, which describes how power is dissipated.

Multiple Means of Representation: Multiple Formats

Web, HTML, PDF, EPUB

Math for Trades: Volume 2

Chad Flinn and Mark Overgaard

The Math for Trades: Volume 2 textbook continues where the first volume left off. Volume 2 increases the challenge with topics such as converting units and working with equations, perimeter, area, and volume. Once again the material is presented from a trades perspective with easy-to-understand examples and videos explanations accompanying questions. The goal of this volume is to take the material you learned in Math for Trades: Volume 1 and apply it to more advanced topics that you may encounter during your trades training.

 <u>Universal Design for</u>
 <u>Learning (UDL) to Remove</u>
 Barriers for All Learning

Inclusive Design

"Design that considers the full range of human diversity with respect to ability, language, culture, gender, age, and other forms of human difference."

— Inclusive Design Research Centre

"Inclusive Design Dimensions" by the Inclusive Design Research Centre. CC BY.

Adopting Accessible Practices

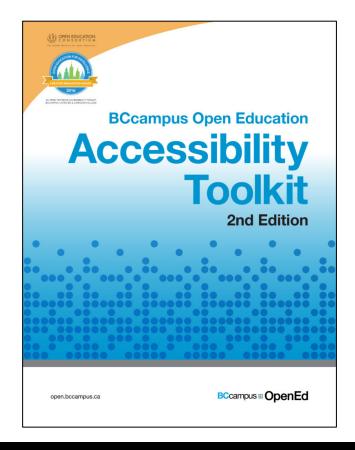

How can you build accessibility considerations into the creation process?

What are the different formats that you can make available?

How can you empower the students using the resource to take advantage of the features and options available?

How can you collect and encourage student feedback and leverage the diverse needs of students to design better?
