Math for Trades: Volume 1

Chad Flinn and Mark Overgaard

The *Math for Trades: Volume 1* textbook represents the building blocks for math training. The book includes whole numbers, fractions, decimals, and percents. The material is presented from a trades perspective with easy-to-understand examples and video explanations accompanying questions. Practice Questions

Try these practice questions. You can either change each number into a fraction with a denominator of 100, or you can divide one number by the other. The choice is yours, but the video answers will go through both ways.

Question 1

The electrical students are wiring an electrical project as part of their practical mark. The students must receive a minimum of 35 out of a possible 50 marks. What percentage is that?

The video player interface shows a title card on the left with the text: **MATH FOR TRADES**, **Fractions to percentage.**, and **Question #1**. The main video area on the right shows a chalkboard with handwritten mathematical formulas, including $x = \frac{3 \pm \sqrt{3^2 - 4 \cdot 1 \cdot 2}}{2 \cdot 1}$ and $x = \frac{3 \pm \sqrt{5}}{2}$. A play button is centered over the chalkboard. The video player controls at the bottom show a progress bar at 0:00 / 0:40 and the BCcampus logo.

Clarke Theme

This chapter looks nice with a subtitle

Before she flew to the launch site, Helena Lyakhov always went through the same ritual. She was not the only cosmonaut who did so, though few ever talked about it.

It was already dark when she let the Administration Building and walked past the pine trees, until she came to the famous statue. The sky was crystal clear, and a brilliant full moon had just risen. Automatically, Helena's eyes focused on

1. Introduction

This book is an attack on current city planning and rebuilding. It is also, and mostly, an attempt to introduce new principles of city planning and rebuilding, different and even opposite from those now taught in everything from schools of architecture and planning to the Sunday supplements and women's magazines. My attack is not based on quibbles about rebuilding methods or hairsplitting about fashions in design. It is an attack, rather, on the principles and aims that have shaped modern, orthodox city planning and rebuilding.

7

AUSTEN THEME

IT IS A TRUTH UNIVERSALLY ACKNOWLEDGED, that a single man in possession of a good fortune, must be in want of a wife.

However little known the feelings or views of such a man may be on his first entering a neighbourhood, this truth is so well fixed in the minds of the surrounding families, that he is considered the rightful property of some one or other of their daughters.

"My dear Mr. Bennet," said his lady to him one day, "have you heard that Netherfield Park is let at last?"

When King Lear proposes "our darker purpose" as the subdivision of his kingdom, he is expressing a politically daring and *avant-garde* intent for the early seventeenth century:

Revenue, and execution of the rest,

In this chapter, learn what tools and materials you need to get started in crochet.

The two main things you'll need are yarn and a hook.

|

There are many different kinds of yarn to choose from. Yarn varies based on material (e.g., wool, acrylic, cotton, bamboo), weight (e.g., lace, fine, bulky), and colour (anything you can think of!). Choose a yarn that is easily available to you and fits your budget.

Whereas knitting uses two needles, crochet uses one hook. Hooks come in different sizes, materials, and designs.

Like yarn, crochet hooks come in a variety of sizes. Matching your the size of your hook to that of your yarn is important to creating a crochet project with appropriate tightness. For instance, using a giant hook with light-weight yarn will result in your project having gaping holes.

When purchasing yarn, the packaging will likely indicate what size of hook is appropriate. Hooks are sized according to the diameter of the shaft in millimetres, meaning that a 5 mm hook is 5 mm thick. If you crochet long enough, you are bound to collect a range of hooks in different sizes.

Crochet hooks are made from aluminum, steel, wood, and plastic, among other things.

Whereas knitting[footnote]Knitting is another fibre craft.[/footnote] uses two needles, crochet uses one hook. Hooks come in different sizes, materials, and designs.

Size

Like yarn, crochet hooks come in a variety of sizes. Matching your the size of your hook to that of your yarn is important to creating a crochet project with appropriate tightness. For instance, using a giant hook with light-weight yarn will result in your project having gaping holes.

When purchasing yarn, the packaging will likely indicate what size of hook is appropriate. Hooks are sized according to the diameter of the shaft in millimetres, meaning that a 5 mm

Common Questions

4.

Why did my project come out a different size than the pattern said it would?

If your project is larger or smaller than the pattern said it would be, it's likely that your gauge is off.

In crochet, your gauge is how many rows and how many stitches per row you produce in a designated area, which is often 4 inches by 4 inches. If the pattern says that your gauge for a 4-inch-by-4-inch square should be 11 rows up and 15 stitches across, but you measure 9 rows up and 13 stitches across, your stitches are likely bigger than those of the pattern's designer. Therefore, if you follow the pattern as written, your project will be bigger than the designer intended. If you want your project to match the size of the designer's, then you have a couple of options.

If the pattern says that your gauge for a 4-inch-by-4-inch square should be 11 rows up and 15 stitches across, but you measure 9 rows up and 13 stitches across, your stitches are likely bigger than those of the pattern's designer. Therefore, if you follow the pattern as written, your project will be bigger than the designer intended. If you want your project to match the size of the designer's, then you have a couple of options.</p></div> <div data-bbox="639 895 1313 1024"><p>Firstly, you can modify your stitching until your gauge matches the designer's. Techniques to try include going up or down a hook size (a bigger hook size will create a bigger stitch), intentionally using more or less yarn per stitch (the more yarn you use, the bigger your stitch will be), or using a hook of a different material, as the material of the hook can affect the size of the stitch.</p></div> | |

Open Gratitude – BCcampus

Open Gratitude

In the spirit of spreadin' love, today we want to share a call to action to express gratitude — especially as it relates to open education. Let me explain.

Post by Krista Lambert, project manager, ABE/Health Zero Textbook Cost Programs, BCcampus

Back in 2017, when we were able to host conferences in person (the good old days), we had the pleasure of having then-CEO of Creative Commons [Ryan Merkley](#) as a [keynote speaker at the BCcampus Open Textbook Summit](#).

During his talk, Ryan Merkley described what makes a successful commons — and also drew on [Elinor Ostrom](#)'s work, on the tragedy of the commons, to touch on scarcity in the digital commons. “What is scarce about an abundant digital commons?” said Ryan Merkley. “Four things: collective action, community, collaboration, and gratitude. They are renewable. They are vital. But they are unfortunately rare.”

Gratitude. This particular point resonated with us. It's something that can easily be expressed, makes a world of difference, and, as Ryan Merkley said, is renewable but rare.

Fast forward to present day, and we'd like to share a brief story that expresses gratitude and

Math in Pressbooks

Option 1: Special characters

Option 2:

Images of equations
with alt text

$$m = \frac{m_0}{\sqrt{1 - \frac{v^2}{c^2}}}$$

Sample alt text:

m equals begin fraction m sub 0 over begin square root 1 minus begin fraction v sup 2 over c sup 2 end fraction end square root end fraction”

Option 3:

Write equations in a
Pressbooks-supported
language

Supported languages include

- LaTeX
- AsciiMath
- MathML

LaTeX

Shortcode syntax: `[latex]e^{i \pi} + 1 = 0[/latex]`

Dollar sign syntax: `$latex e^{i \pi} + 1 = 0$`

AsciiMath

Shortcode syntax: `[asciimath]e^{i \pi} + 1 = 0[/asciimath]`

Dollar sign syntax: `$asciimath e^{i \pi} + 1 = 0$`

MathML

Markup syntax: `<math><!-- Your math here --></math>`

Example: LaTeX

$$[\text{latex}]\backslash\text{LARGE}\backslash\text{dfrac}\{5\}\{8\}\backslash\text{times}\backslash\text{dfrac}\{3\}\{4\}=?[\text{/latex}]$$

Step 1: Multiply the numerators together.

$$[\text{latex}]\backslash\text{LARGE}5\backslash\text{times}3=15[\text{/latex}]$$

Step 2: Multiply the denominators together.

$$[\text{latex}]\backslash\text{LARGE}8\backslash\text{times}4=32[\text{/latex}]$$

Step 3: Put each of the answers in the appropriate place in the fraction.

$$[\text{latex}]\backslash\text{LARGE}\backslash\text{dfrac}\{5\}\{8\}\backslash\text{times}\backslash\text{dfrac}\{3\}\{4\}=\backslash\text{dfrac}\{15\}\{32\}[\text{/latex}]$$

$$\frac{5}{8} \times \frac{3}{4} = ?$$

Step 1: Multiply the numerators together.

$$5 \times 3 = 15$$

Step 2: Multiply the denominators together.

$$8 \times 4 = 32$$

Step 3: Put each of the answers in the appropriate place in the fraction.

$$\frac{5}{8} \times \frac{3}{4} = \frac{15}{32}$$
